WEBSITE PROJECTS

Explanation and Screenshot Documentation

Projects covered

1. Academic Dashboard
2. Delicious Cafe Website
3. PowerFit Gym Website

This document explains the purpose, layout, main sections, and visible features of the three website interfaces shown in the supplied screenshots. The screenshots are included as evidence of the displayed pages.

Prepared using the provided website screenshots

Introduction

A website is a collection of related web pages presented through a browser. HTML is commonly used to organize page content, while CSS controls presentation such as colors, spacing, typography, alignment, borders, and responsive layout. The three projects documented here demonstrate how these techniques can be used to build interfaces for student information, a restaurant, and a fitness center.

Common technologies and concepts

- **HTML:** structures headings, paragraphs, navigation links, tables, cards, images, and forms.
- **CSS:** styles page backgrounds, text, colors, spacing, card layouts, shadows, and progress bars.
- **Navigation:** helps visitors move between sections of a website.
- **Forms:** collect information entered by a visitor. A working submission normally also needs suitable JavaScript or server-side processing.
- **Visual organization:** headings, cards, tables, and consistent spacing make information easier to understand.

1. Academic Dashboard

Objective

The objective of the Academic Dashboard is to present a student's academic information in one organized interface. It allows a student to quickly review personal details, academic performance, attendance, subjects, and examination dates.

Main sections and explanation

- **Welcome heading:** displays the dashboard title and a greeting to the student.
- **Student Details:** shows the student's name, roll number, course, and semester.
- **Performance summary cards:** highlight the CGPA, overall attendance percentage, and number of subjects.
- **Semester Results:** uses a table to show each semester's SGPA and pass status.
- **Subject Attendance:** uses horizontal progress bars to compare attendance percentages for individual subjects.
- **Subject Information:** lists subject names, subject codes, and faculty names in a table.
- **Examination Schedule:** displays the subject, examination date, and time.

Design observations

The dashboard uses a light background with white content panels. Blue headings and table headers create a consistent visual hierarchy, while green values and progress bars draw attention to performance indicators. Cards separate important figures from the detailed tables.

Conclusion

The Academic Dashboard provides a clear overview of student records and academic progress. Its use of summary cards, tables, and progress bars makes information easy to scan and compare.

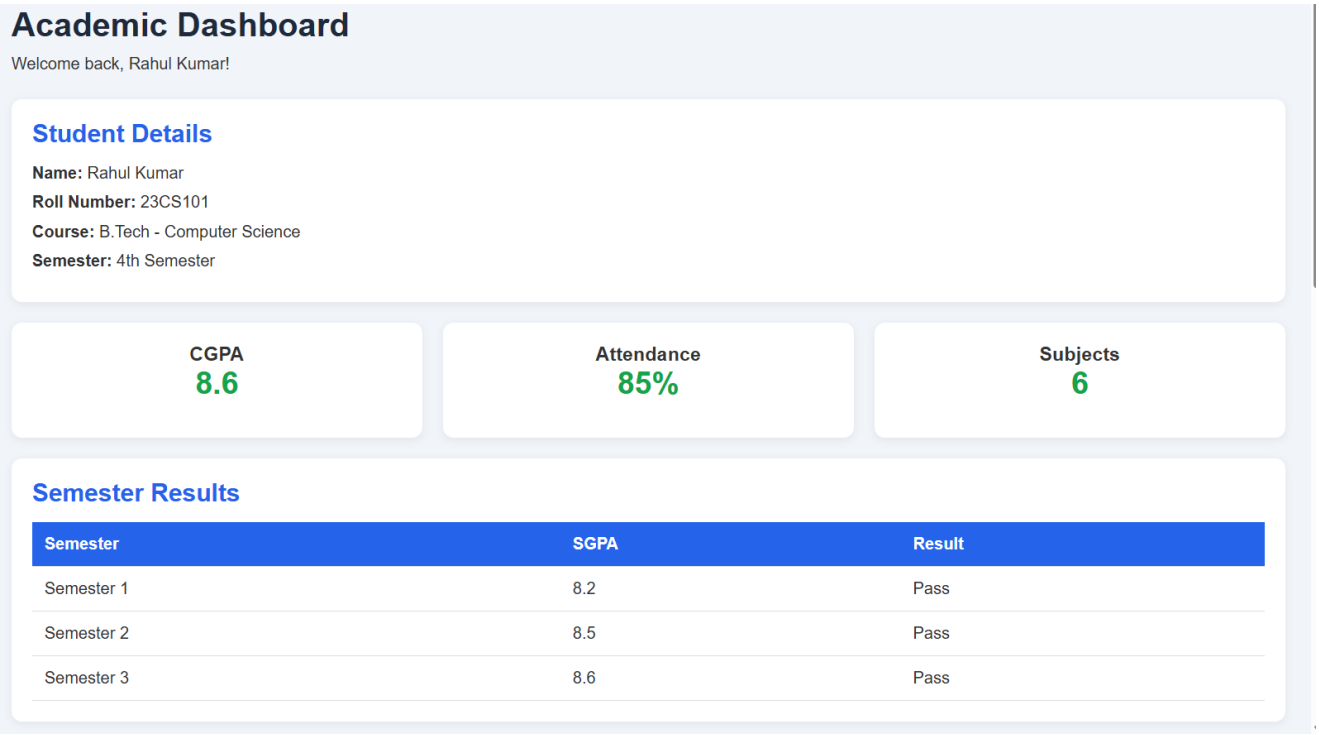

Figure 1. Academic Dashboard: student details, summary cards, and semester results.

Subject Attendance

Mathematics - 90%

Computer Networks - 80%

DBMS - 85%

Subject Information

Subject	Code	Faculty
Mathematics	MA401	Mr. Kumar
DBMS	CS402	Ms. Priya
Computer Networks	CS403	Mr. Ramesh

Examination Schedule

Subject	Date	Time
Mathematics	10-11-2026	9:30 AM
DBMS	13-11-2026	9:30 AM
Computer Networks	16-11-2026	9:30 AM

2. Delicious Cafe Website

Objective

The Delicious Cafe website is designed to introduce a cafe to visitors and present its food items, chef, customer feedback, opening hours, and table reservation form. The page combines restaurant information with navigation to its main sections.

Main sections and explanation

- **Header and navigation:** displays the cafe name, a short tagline, and links such as Home, Menu, Chef, Reviews, and Contact.
- **Hero section:** uses a large restaurant background image with a welcome message and a 'View Our Menu' call-to-action.
- **Our Menu:** presents food and drink cards, including Pizza, Burger, and Coffee, with short descriptions and prices.
- **Our Chef:** introduces the chef and gives a short description of their role.
- **Our Restaurant:** describes the atmosphere and purpose of the dining space.
- **Customer Reviews:** displays a sample customer comment to build trust.
- **Opening Hours:** tells visitors the days and times the cafe is open.
- **Book a Table:** provides fields for a visitor's name, email, date, and number of guests, along with a reservation button.
- **Location and footer:** show the cafe location text and copyright information.

Design observations

The cafe page uses warm brown, cream, and orange colors to create a welcoming food-related theme. White cards with rounded corners and soft shadows distinguish menu items and other content. The large hero image attracts attention, while the navigation links make the page easier to explore.

Functional note

The reservation area is a front-end form as shown in the screenshots. To store bookings or send confirmations, it would need form validation and a connected backend or booking service.

Conclusion

The Delicious Cafe website gives visitors the essential information they need before visiting a restaurant. It combines menu presentation, business details, customer review content, and a reservation interface in one page.

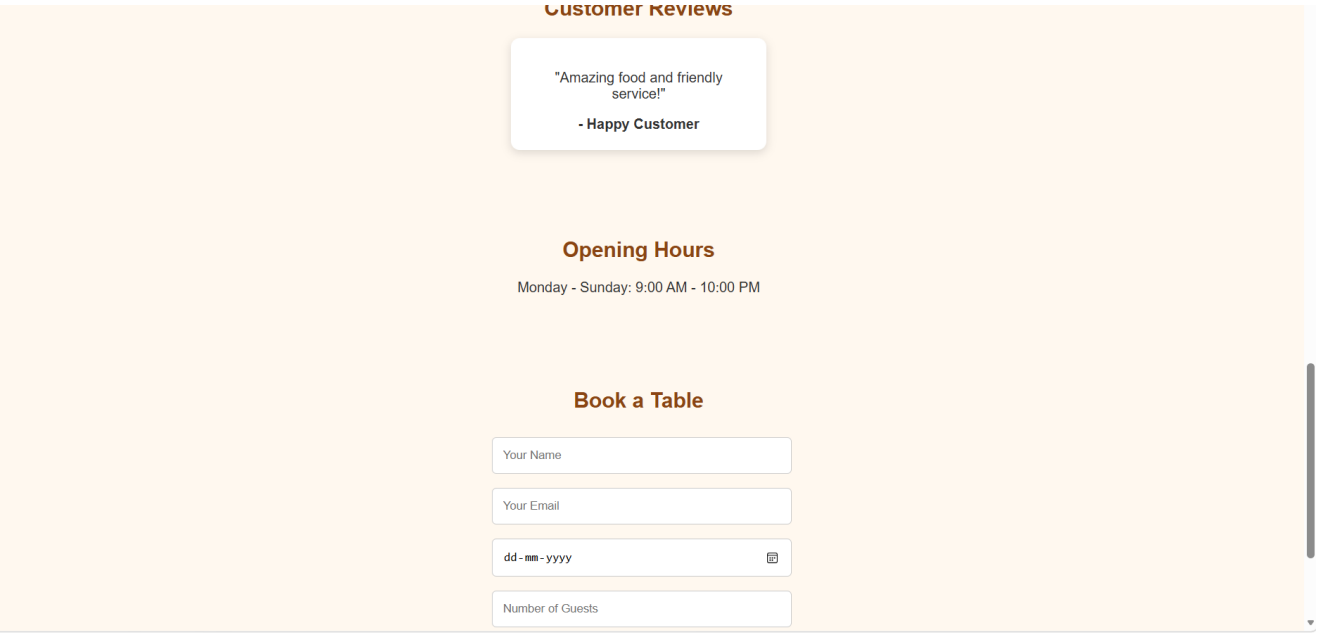

Figure 5. Delicious Cafe: customer review, opening hours, and reservation form.

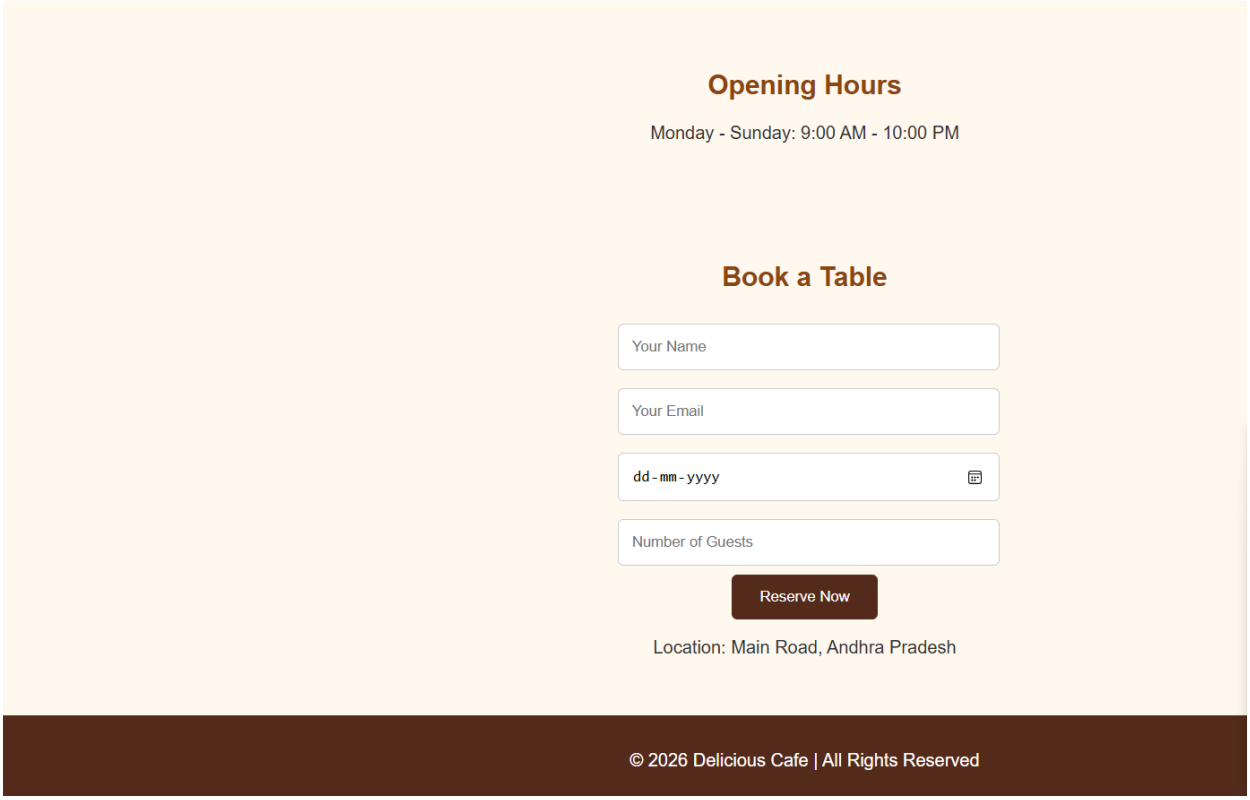

Figure 6. Delicious Cafe: reservation fields, location, and page footer.

3. PowerFit Gym Website

Objective

The PowerFit Gym website is designed to promote a fitness center and explain the services it offers. It introduces the gym, highlights workout programs and trainers, and displays membership plans to help visitors understand the available options.

Main sections and explanation

- **Header:** displays the POWERFIT GYM name, the slogan 'Build Your Body, Build Your Confidence!', and navigation links.
- **Welcome section:** introduces the gym with a short fitness message and a gym-related image.
- **Workout Programs:** presents options such as Weight Training, Yoga, and Cardio, with a short explanation of each.
- **Our Trainers:** introduces trainers and their areas of expertise, such as strength training and yoga instruction.
- **Membership Plans:** displays Basic, Standard, and Premium membership options with monthly prices.

Design observations

The gym page uses a dark header with a bright orange title to create a bold fitness identity. The welcome image supports the gym theme. Individual program, trainer, and membership cards group related information and make the page easier to scan.

Conclusion

The PowerFit Gym website communicates the gym's main services and membership choices. Its section-based layout helps a visitor find workout information, trainer details, and pricing.

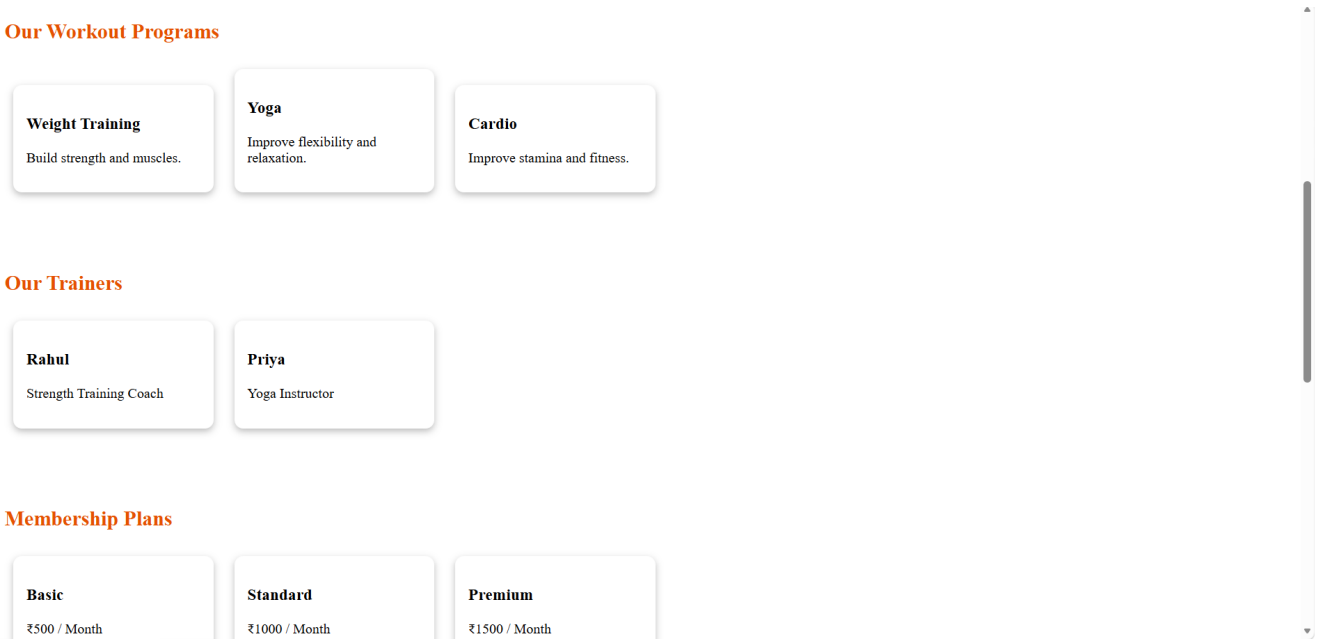

Figure 8. PowerFit Gym: workout programs, trainers, and membership plans.

Overall Comparison

Project	Main purpose	Important interface elements
Academic Dashboard	Show student academic information	Summary cards, progress bars, tables
Delicious Cafe	Promote a restaurant and support reservations	Hero image, menu cards, review, booking form
PowerFit Gym	Promote fitness services and memberships	Welcome image, program cards, trainer cards, plans

Final Conclusion

These three website examples demonstrate how HTML and CSS can be used to create different kinds of web interfaces. The Academic Dashboard focuses on structured data and quick performance summaries. The Delicious Cafe website focuses on presenting products and visitor information. The PowerFit Gym website focuses on services, staff, and membership choices. Across all three projects, clear headings, consistent colors, organized sections, and readable content improve the user experience.

Possible future improvements

- Make each page responsive so it works well on mobile phones, tablets, and desktops.
- Add form validation and meaningful success or error messages.
- Connect reservation or registration forms to a secure backend where required.
- Improve accessibility with descriptive image alternative text, clear labels, and keyboard-friendly navigation.
- Test all navigation links and interactive controls in multiple browsers.
